

Create an MCP Server in 7 Minutes with FME

AGNTCon + MCPCon North America | October 22, 2026

Matt Meeboer
Safe Software

All Data. Any AI. MCP Ready.

*One platform that connects everything your organization runs on.
The people, systems, and AI that need it.*

FME Enterprise Integration Platform

The only All-Data, Any-AI Platform.

FME Form

No-code data movement
and transformations
workflows are built here.

FME Flow

Brings life to FME Form
workflows.

FME Flow Hosted
Safe Software SaaS Version of
FME Flow

FME Realize

Experience data in real
world context, in real time.

fme.safe.com/platform

FME is the layer between all your data and MCP.

Build once. Works with every AI model. On-prem, cloud, or both.

Today's Example: Field Work, Guided by FME

The situation

Report a cracked sidewalk while still on site.

What the user needs

- Describe the issue
- Attach it to the correct parcel
- Set urgency
- Create the work order
- Update the map

What FME handles

- Validates fields
- Applies allowed values
- Writes to PostgreSQL
- Updates ArcGIS
- Returns confirmation

PostgreSQL

work_orders table: The audit log every maintenance team works from

Esri ArcGIS

Parcels feature service: the map the maintenance team uses to see what's open.

Where the systems live

- On-prem, hosted, cloud, or hybrid — FME can reach them.

3 Steps, under 7 minutes

1. Publish

Push the workspace to
FME Flow

2. Register

Add it as a tool on the
MCP Server.

*Name, description,
parameters.*

3. Chat

Invoke it from an Agent.
Confirm updates.

Demo

Summary

- FME goes where your data lives: cloud, on-premises, hosted systems, hybrid
- Any FME workspace can become an MCP tool
- 3 steps: Publish, Register, Test - under 7 minutes
- Raw data is never exposed or accessed directly: FME is the data guardian

FME All Data. Any AI. MCP Ready.
