THE PROBLEM

THE PROBLEM

Data Quality
Capacity
Real-Time monitoring
Monitoring
Pipelines
Data usage
Security

THE PROBLEM

Data Quality
Capacity
Real-Time monitoring
Monitoring
Pipelines
Data usage
Security

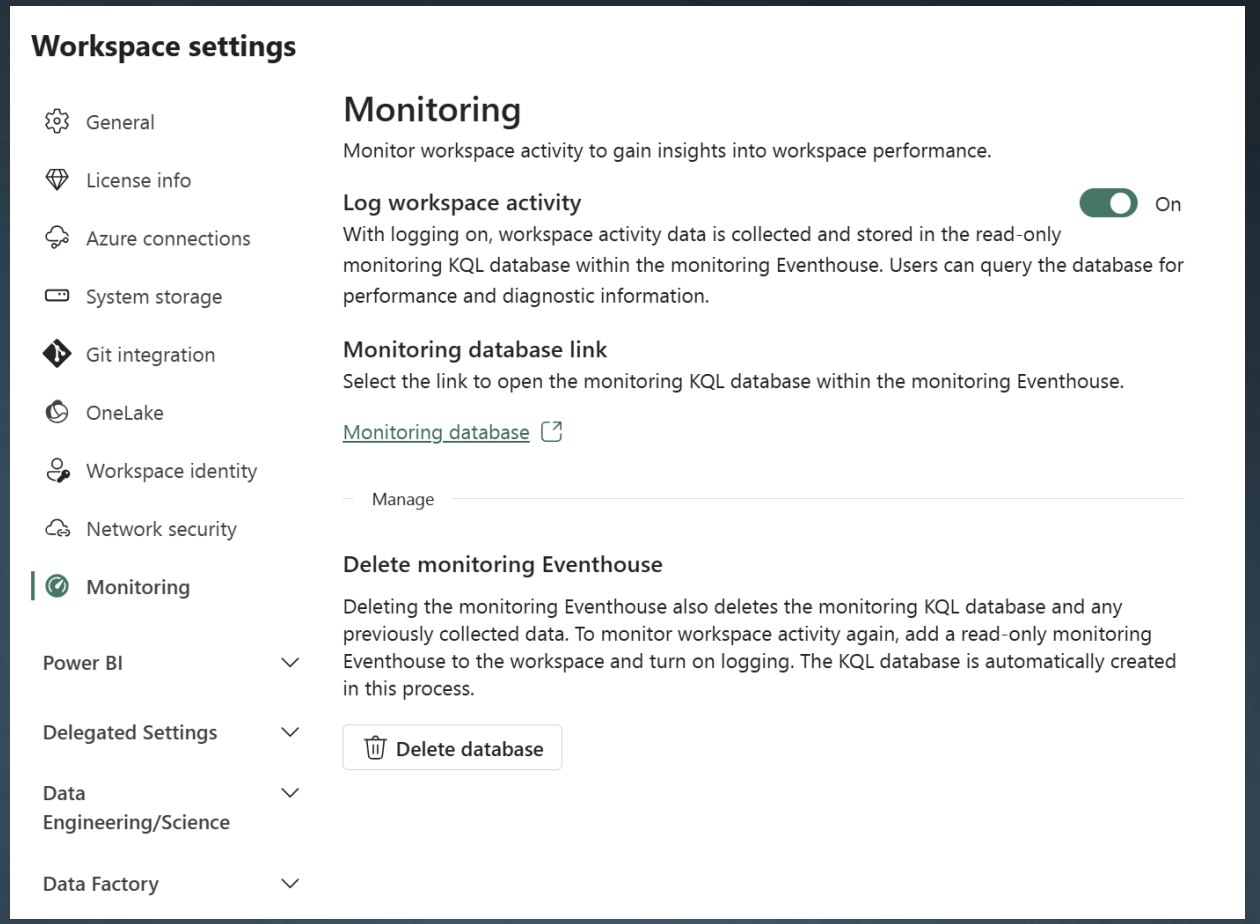

THE SOLUTION

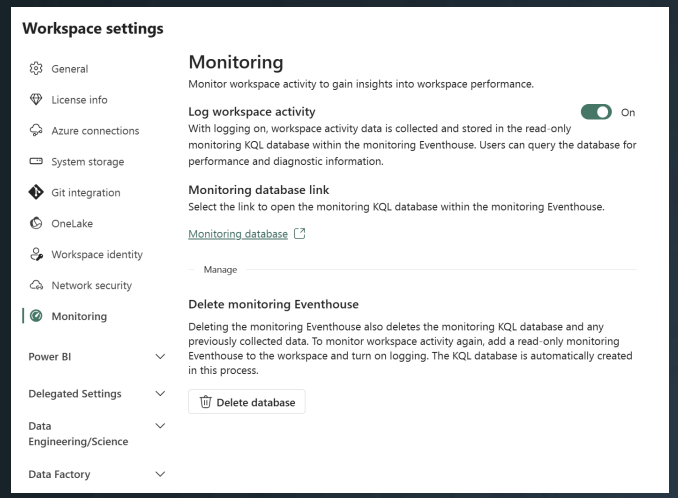

Standard monitoring

- Who is doing what
- How much is being used
- Where is my capacity being used
- Are my semantic models up to date

THE SOLUTION

Fabric workspace monitoring

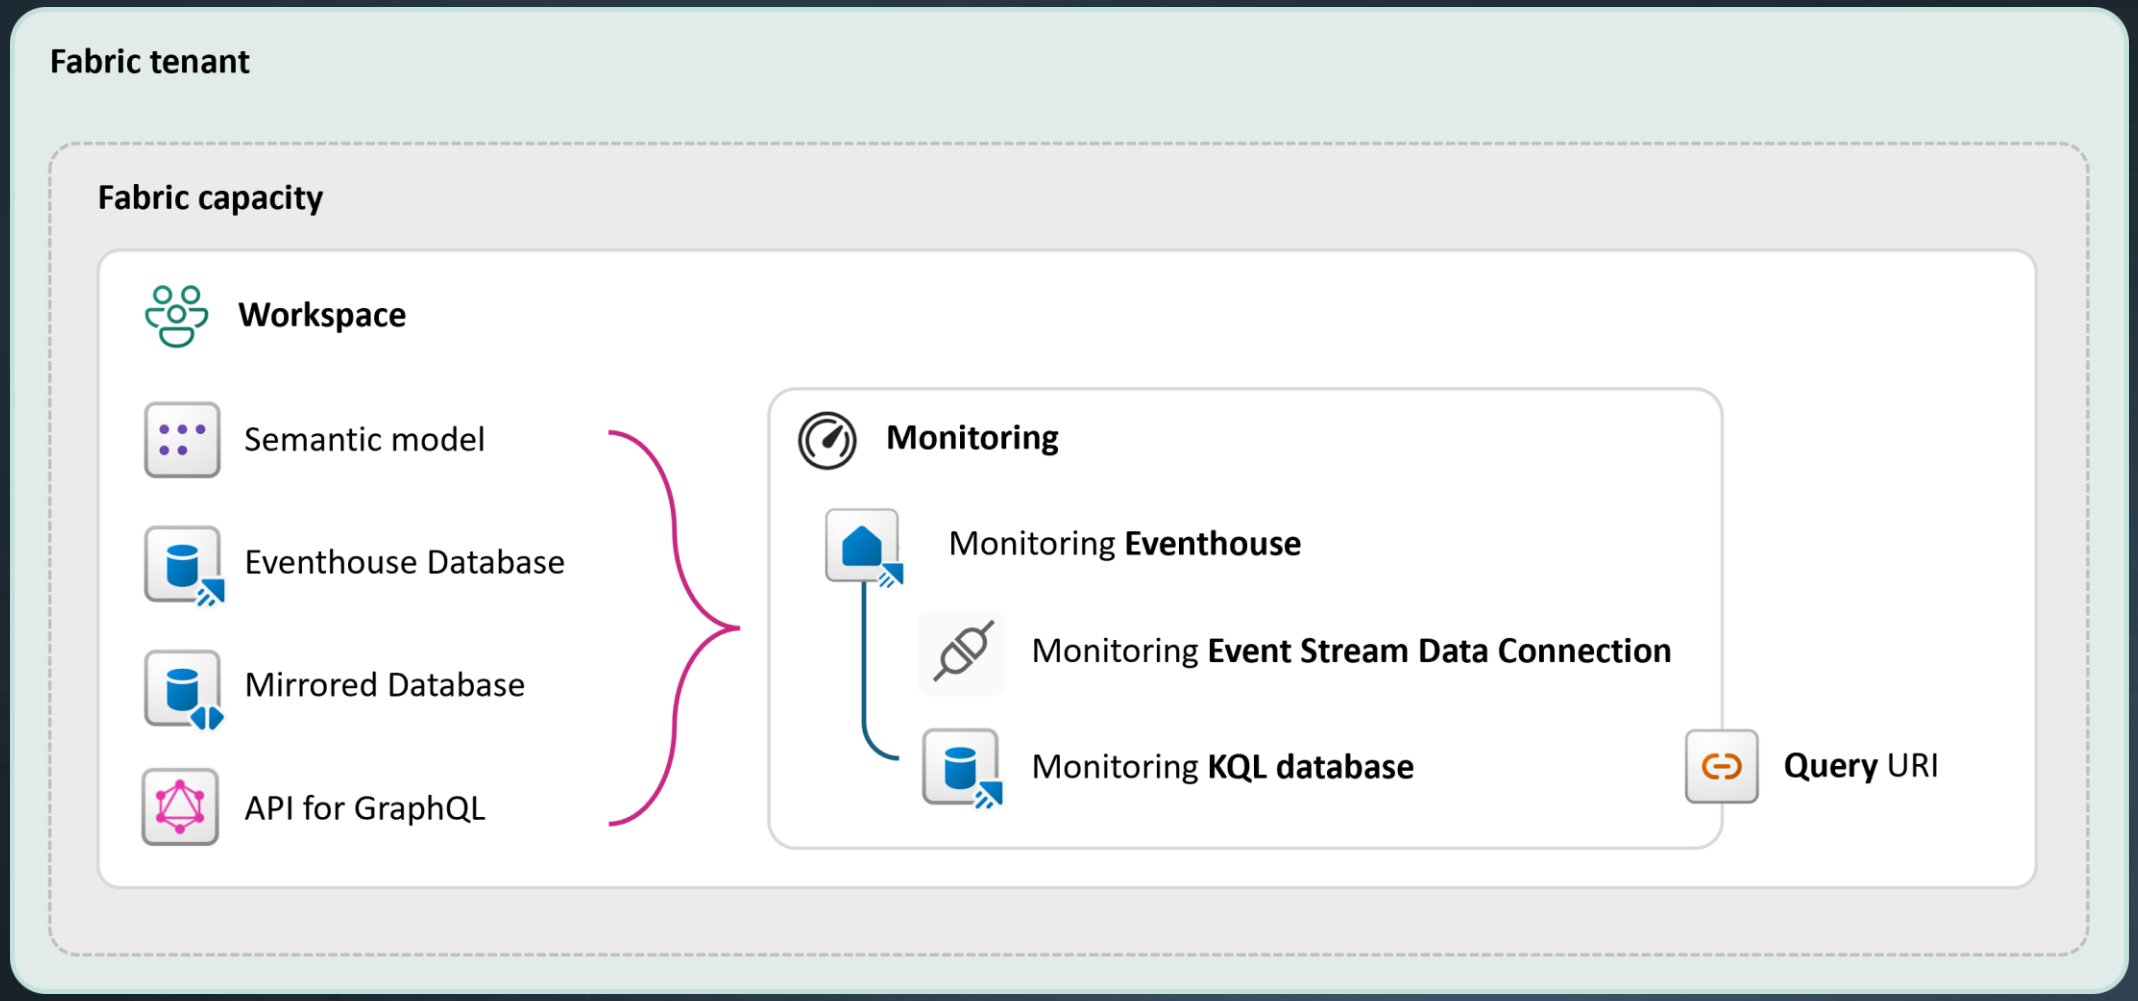

Workspace monitoring is a Microsoft Fabric database that collects and organizes logs and metrics from a range of Fabric items in your workspace. Workspace monitoring lets workspace users access and analyze logs and metrics related to Fabric items in the workspace. You can query the database to gain insights into the usage and performance of your workspace.

THE SOLUTION Fabric workspace monitoring

When Workspace Monitoring is enabled at the workspace level, the workspace will start sending the selected diagnostics to a KQL database within Fabric that can be queried using KQL or SQL.

THE SOLUTION – THE EASY WAY

Deployed for you

You choose and deploy

Eventstream

Eventhouse
KQL Database

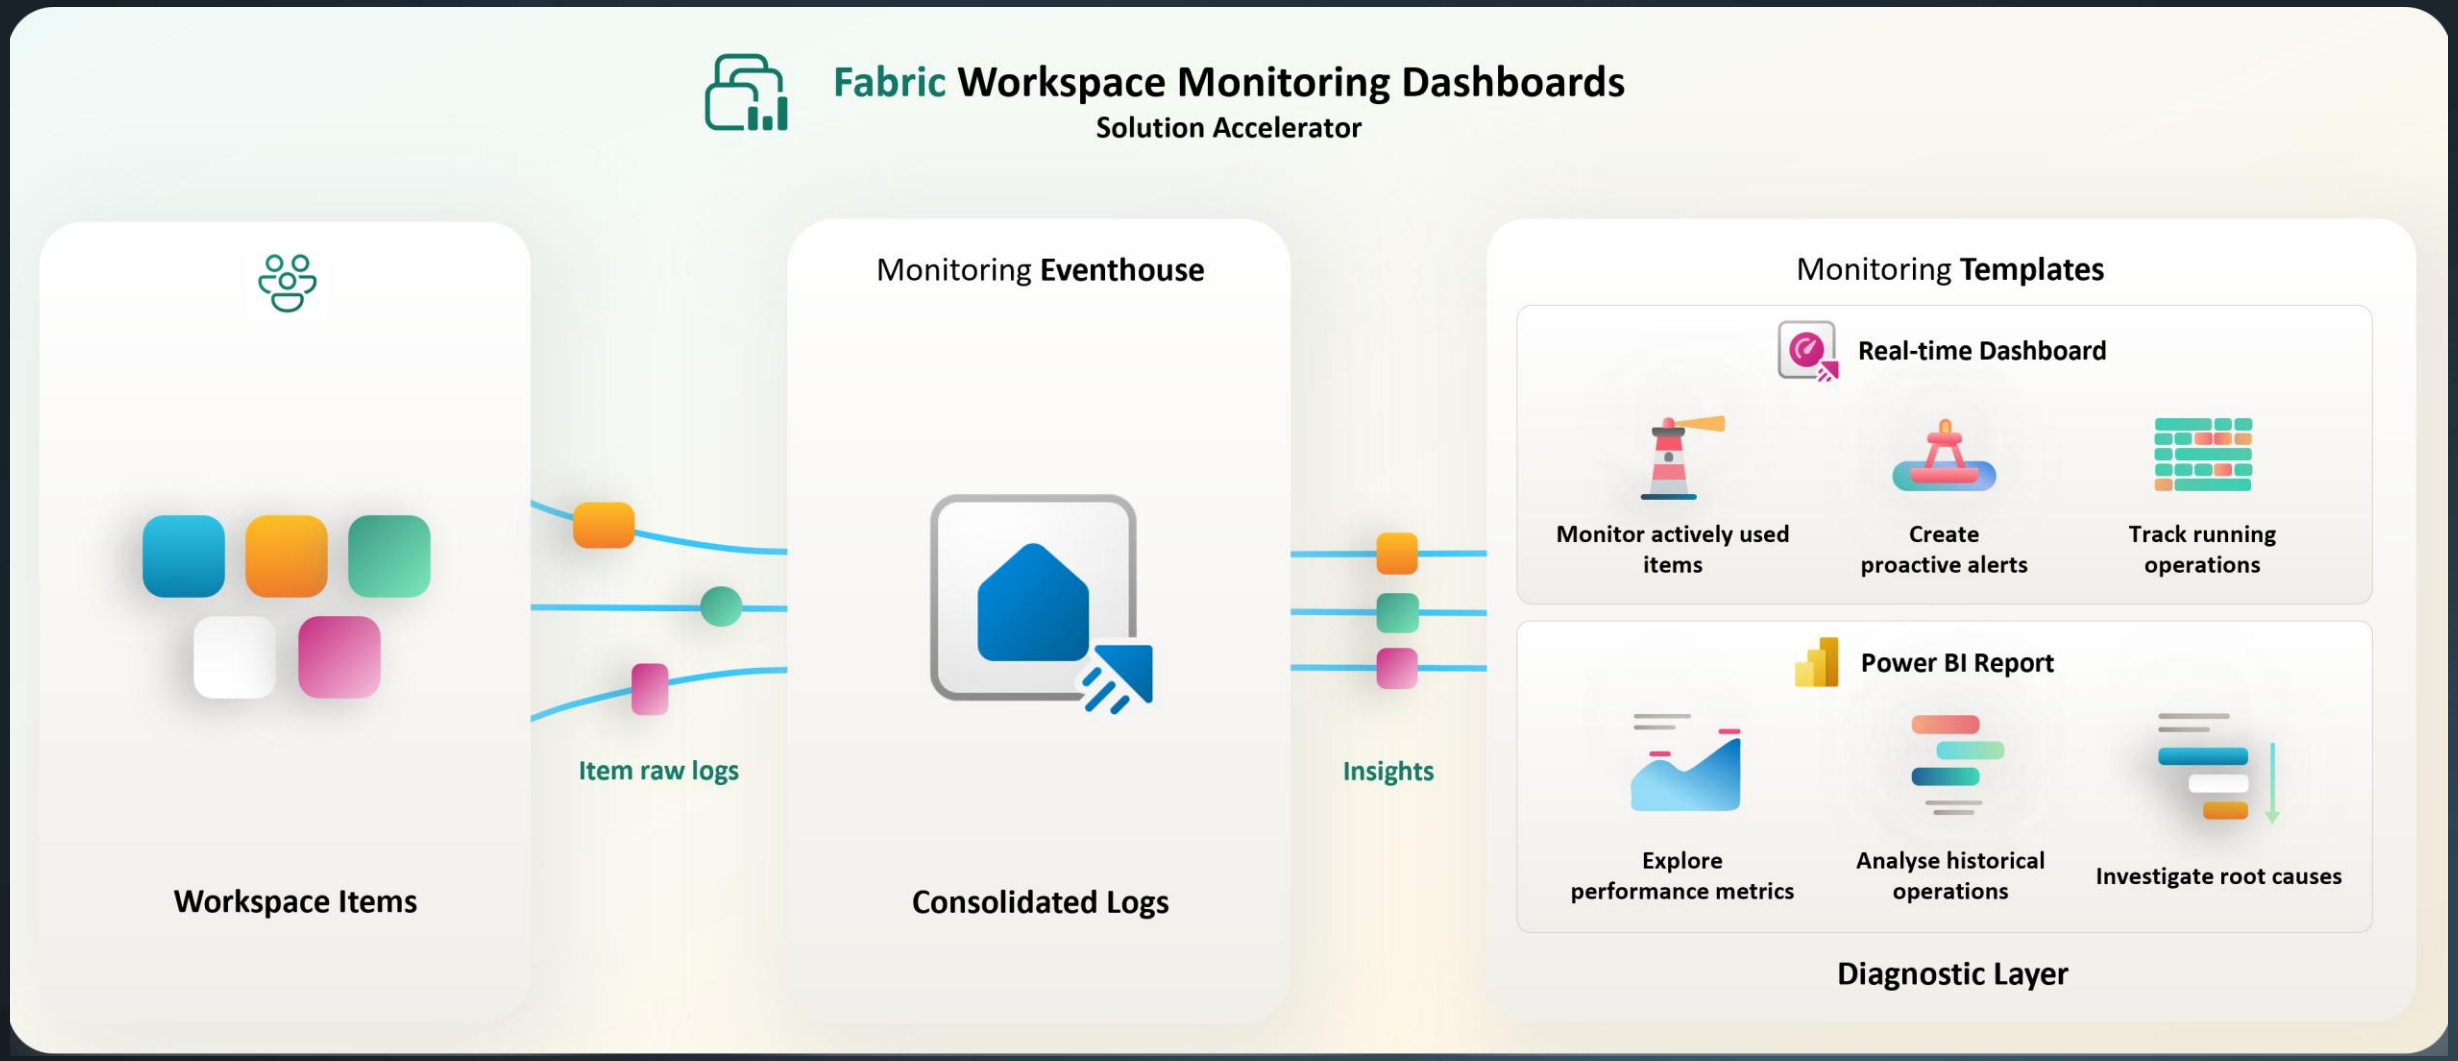

Power BI
report

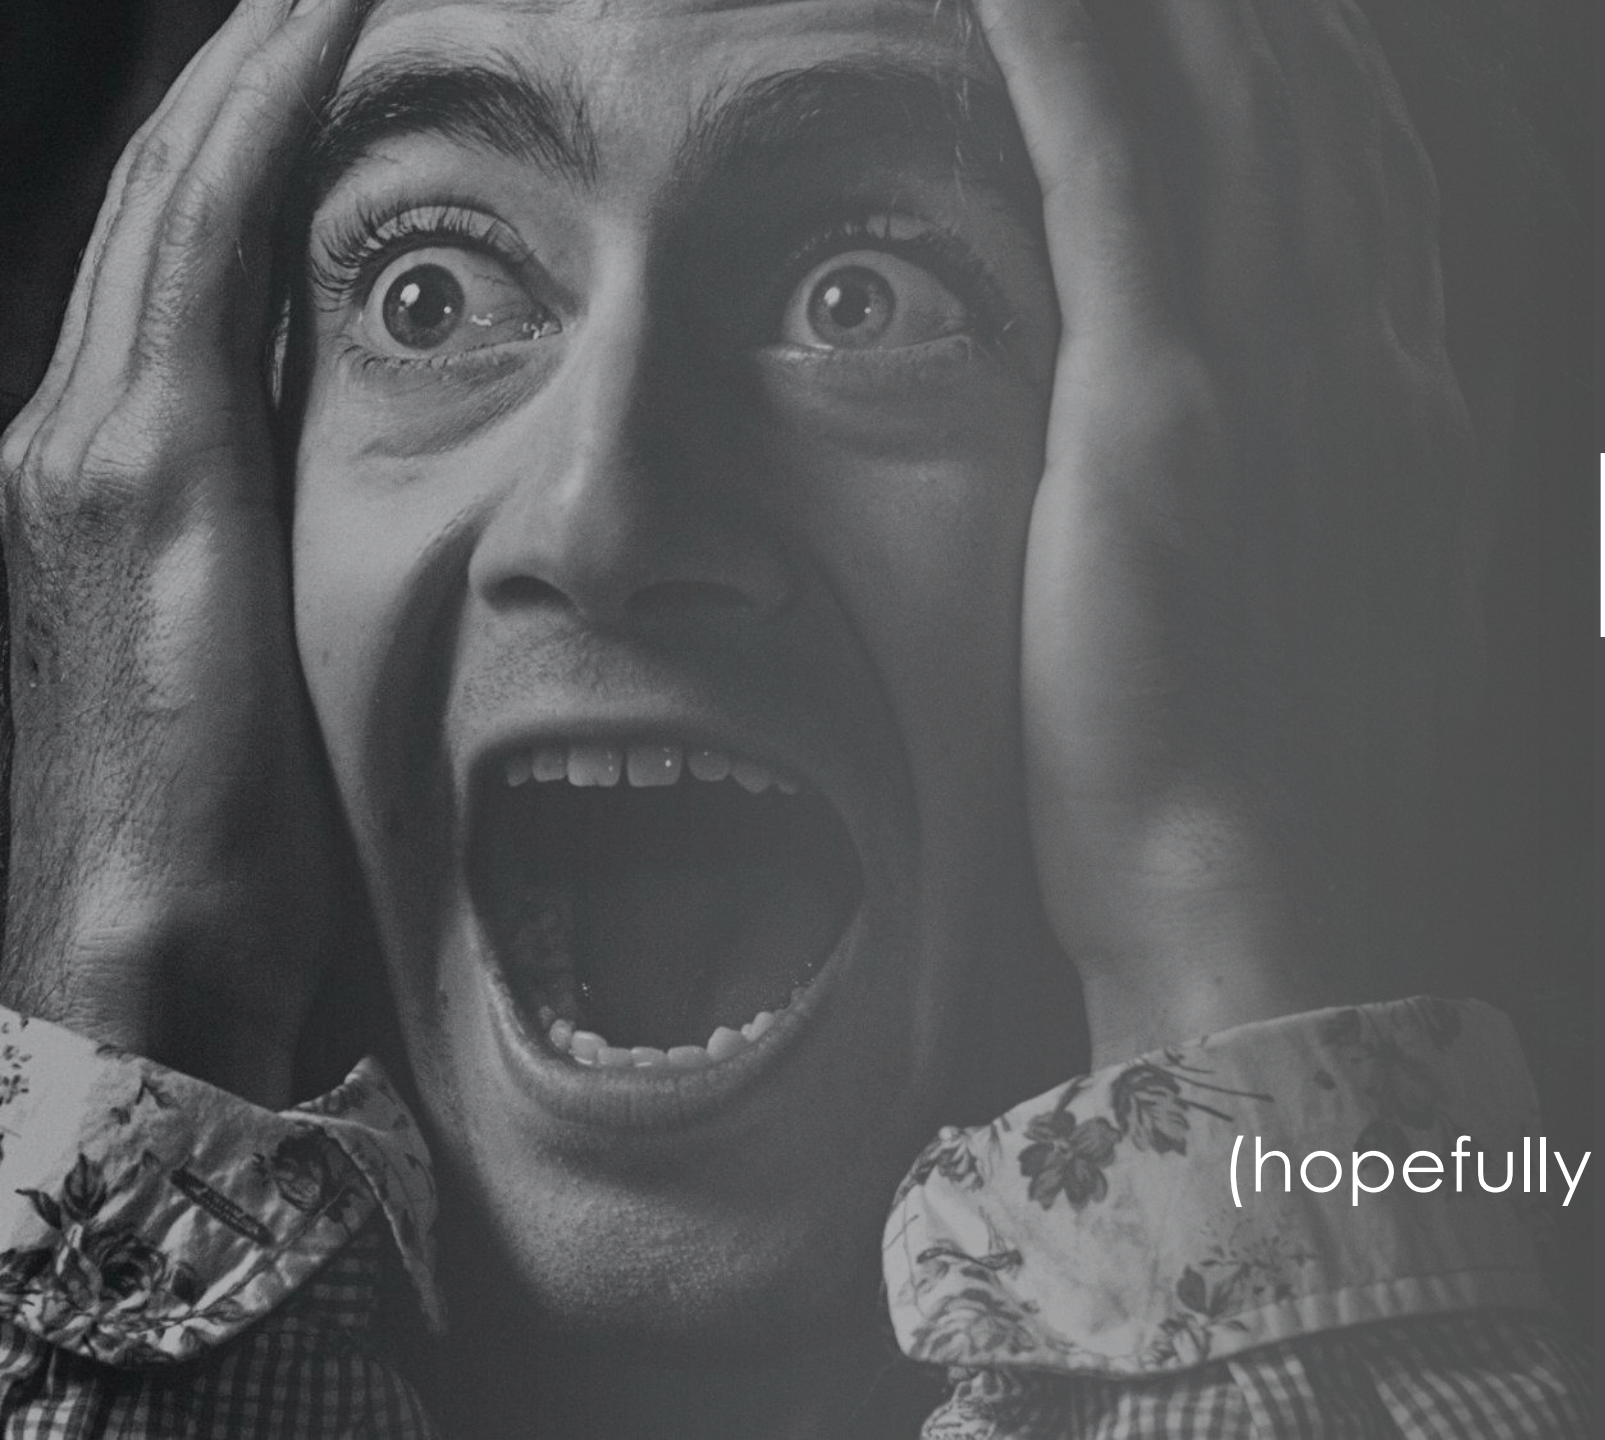

Real-Time
Dashboard
